## **1. Introduction**

### **1.1 Purpose**

This manual provides comprehensive instructions for using the MUNCH Food Ordering and Restaurant Management System. It guides customers, staff members, and the owner through the main functions of the web application, including account registration, login, menu browsing, cart checkout, payment, receipt viewing, reservation booking, order handling, staff operations, menu management, staff record management, and business reporting.

The purpose of this manual is to help users understand the system interface and complete daily restaurant tasks correctly. It also acts as a reference document for new users who need step-by-step guidance before operating the system independently.

### **1.2 Web Application Overview**

MUNCH is a web-based food ordering and restaurant management system developed for a local restaurant environment. The system centralizes customer ordering, reservation booking, payment recording, staff order processing, menu management, staff administration, and owner reporting into one organized platform. Instead of relying on handwritten orders, manual calculations, or scattered records, MUNCH stores and updates restaurant activities digitally so that customers, staff, and the owner can work with clearer information.

The system is designed around three main user roles. Customers use the system to create an account, browse menu items, add food to the cart, make payments, download receipts, and submit table or event reservations. Staff members use the system to log in, view active orders, check payment information, and update order progress. The owner uses the system to manage menu records, staff information, business reports, and reservation tracking. This role-based arrangement helps each user access only the functions needed for their responsibility.

The web application supports restaurant operations by reducing order miscommunication, speeding up payment calculations, improving record management, and allowing the owner to monitor business activity through reports and analytics. It is especially useful during busy periods because order information and payment status can be viewed through the system instead of being passed verbally or written manually.

## 1.2.1 System Architecture

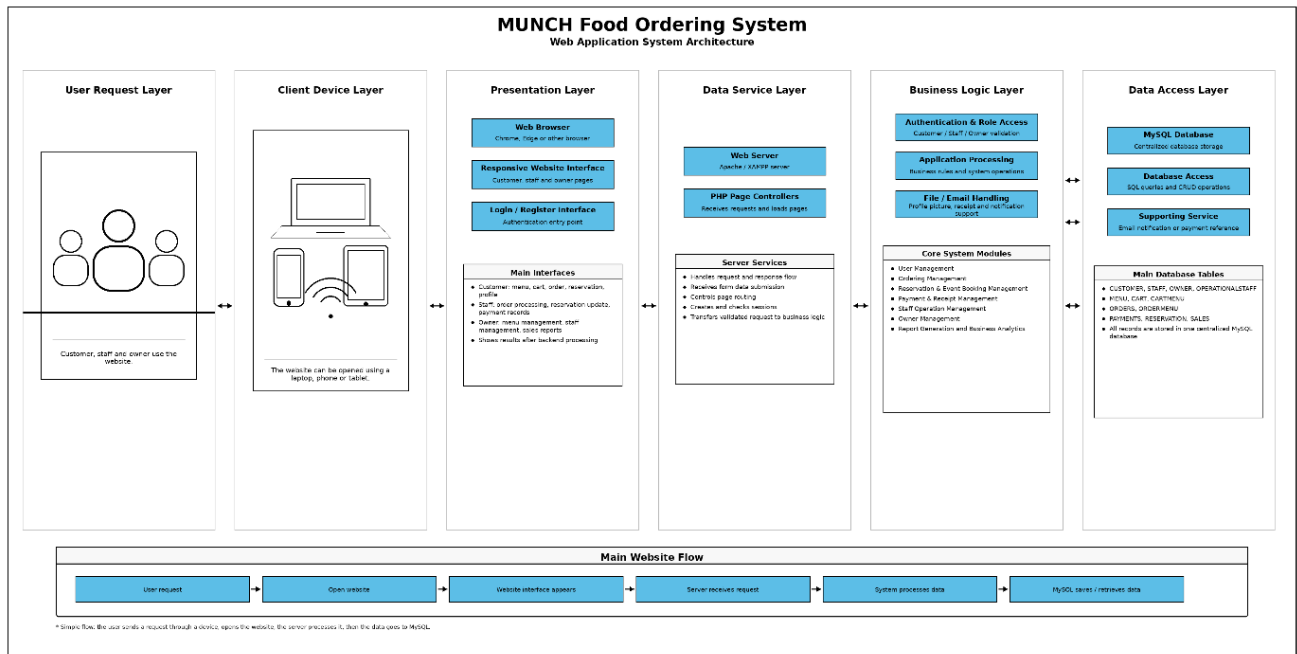

Figure 1: MUNCH Web Application System Architecture

The system architecture is arranged in six main layers. The User Request Layer begins with customer, staff, and owner actions. The Client Device Layer represents the laptop, desktop computer, tablet, or smartphone used to open the website. The Presentation Layer displays the web interface, including login, registration, menu, cart, reservation, payment, staff dashboard, and owner dashboard pages.

The Data Service Layer receives user requests through the web server and PHP page controllers. The Business Logic Layer performs system rules such as authentication, role access control, order processing, reservation management, payment validation, file handling, and report generation. The Data Access Layer communicates with the MySQL database, where customer, staff, menu, order, cart, reservation, payment, and sales data are stored and retrieved. Overall, the architecture shows how a user request moves from the website interface to the server, then to the database, before the result is returned to the user.

## 1.2.2 System Modules

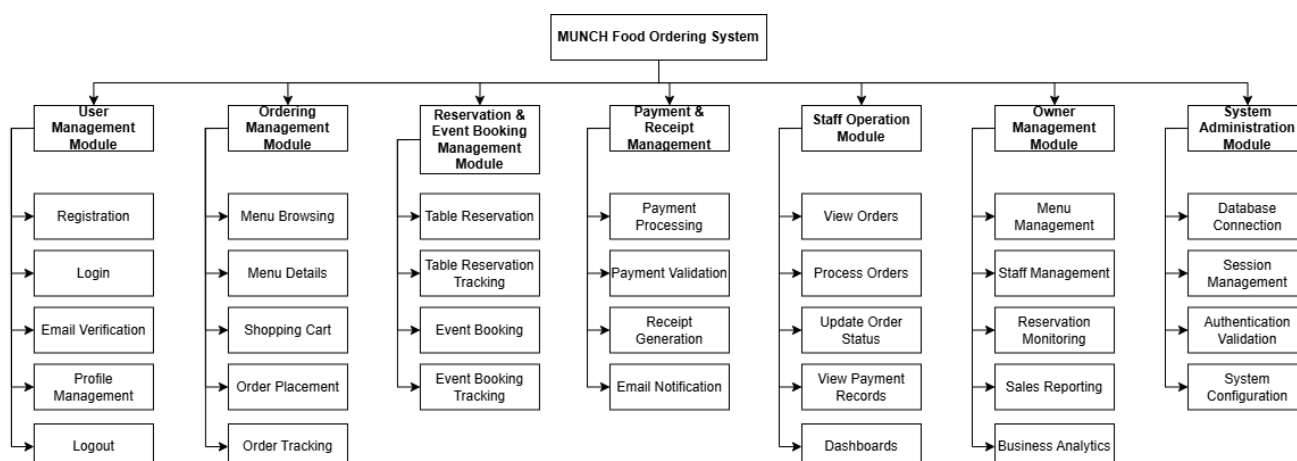

Figure 2: MUNCH System Module Diagram

| Module                                          | Description                                                                                                        |
|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| User Management Module                          | Handles registration, login, email verification, profile management, and logout for users.                         |
| Ordering Management Module                      | Handles menu browsing, menu details, shopping cart, order placement, and order tracking.                           |
| Reservation and Event Booking Management Module | Handles table reservations, event bookings, reservation tracking, and booking status monitoring.                   |
| Payment and Receipt Management Module           | Handles payment processing, payment validation, receipt generation, and email notification.                        |
| Staff Operation Module                          | Helps staff view orders, process orders, update order status, view payment records, and use dashboard information. |
| Owner Management Module                         | Helps the owner manage menu items, staff records, reservations, sales reporting, and business analytics.           |
| System Administration Module                    | Supports database connection, session management, authentication validation, and system configuration.             |

|                                                      |                |
|------------------------------------------------------|----------------|
| MUNCH Food Ordering and Restaurant Management System | Version: 1.0   |
| User Manual                                          | Date: 1/7/2026 |

### 1.3 Scope

This manual covers all main user-facing functions of the MUNCH system, including customer account setup, customer login, menu browsing, cart review, order checkout, payment processing, receipt download, table reservation, event booking, staff login, staff order management, owner login, menu management, employee record management, reporting, and reservation monitoring.

The manual focuses on how to operate the web application interface. It does not provide source code documentation, database administration steps, server deployment configuration, or real third-party payment gateway setup. For the current project version, payment and email-related features are presented as system demonstration functions unless real external services are integrated in the future.

### 1.4 Audience

This manual is intended for all users of the MUNCH web application. The customer section is for restaurant customers who want to order food, make payments, view receipts, and create reservations. The staff section is for restaurant employees who manage orders and monitor payment or kitchen status. The owner section is for administrators who manage restaurant data, employee records, menu items, reports, and booking records. It can also be used by lecturers, evaluators, and project team members who need to understand the system flow during demonstration.

## 2. Getting Started

### 2.1 System Requirements

| Requirement Type   | Requirement                                                                                                                       |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Hardware           | Laptop, desktop computer, tablet, or smartphone with a working display and keyboard or touch input.                               |
| Software           | A modern web browser such as Google Chrome, Microsoft Edge, or Mozilla Firefox. Internet Explorer is not supported.               |
| Internet / Network | Stable internet connection for hosted deployment, or local network access if the system is demonstrated through localhost.        |
| Server Environment | For development or demonstration, the system can run using XAMPP with Apache, PHP, and MySQL.                                     |
| Database           | MySQL database connection is required for storing account, menu, order, cart, payment, reservation, staff, owner, and sales data. |
| User Account       | Customers, staff, and owner users must log in with the correct role before accessing protected functions.                         |

The system performs best in Google Chrome or Microsoft Edge because both browsers support modern HTML, CSS, JavaScript, and responsive interface behavior. Since MUNCH is web-based, users do not need to install a mobile app from an app store. They only need to open the correct website address or localhost link through a browser.

### 2.2 Installation Instructions

For normal users, no installation is required. The system is accessed through a web browser. Users should follow these steps:

1. Open a supported web browser such as Google Chrome or Microsoft Edge.
2. Enter the MUNCH system URL provided by the restaurant, project team, or system administrator.
3. Wait until the landing page appears.
4. Use the navigation bar to access Home, Profile, Menu, Order, or Reservation.
5. Log in according to the correct role when the system asks for authentication.

For project demonstration, the system may be opened through a local server environment. In that case, Apache and MySQL must be running first, and the website is accessed through a localhost address prepared by the developer.

|                                                      |                |
|------------------------------------------------------|----------------|
| MUNCH Food Ordering and Restaurant Management System | Version: 1.0   |
| User Manual                                          | Date: 1/7/2026 |

## 2.3 Initial Setup

1. Launch the MUNCH website through the provided browser link.
2. Allow the page to load fully before clicking any navigation button.
3. Click Profile to choose the correct role: Customer, Staff, or Owner.
4. Create a new customer account if the user does not have one.
5. Verify the email account if the verification screen appears.
6. Log in using the registered username or staff ID and password.
7. After login, continue using the allowed functions based on the selected user role.

### 3. User Interface Overview

#### 3.1 Main Screen Description

The main screen of MUNCH is the landing page. It introduces the restaurant brand, displays the main navigation bar, provides a search area, and gives quick access to ordering and reservation functions. The interface uses a clean teal-and-white theme with large headings, rounded buttons, and food images to make the system friendly and easy to follow.

- **Navigation Bar:** Allows users to move between Home, Profile, Menu, Order, and Reservation pages.
- **Search Bar:** Allows users to search for menu items by typing a keyword.
- **Cart Icon:** Shows selected menu items and opens the cart for checkout.
- **Order Food Button:** Starts the food ordering process after customer login.
- **Make Reservation Button:** Starts table or event booking after customer login.

##### 3.1.1 Menus and Icons

| Visual Element               | Meaning                                                                                                   | User Action                                               |
|------------------------------|-----------------------------------------------------------------------------------------------------------|-----------------------------------------------------------|
| Teal primary button          | Main action such as Login, Add To Cart, Save Changes, or Proceed To Checkout.                             | Click to continue the current process.                    |
| White/light secondary button | Optional action such as Cancel, Back To Menu, View Details, or Order Again.                               | Click to return or perform a non-final action.            |
| Search icon/search bar       | Searches menu items or records by keyword.                                                                | Type a keyword and review matching results.               |
| Cart icon                    | Shows food items selected for checkout.                                                                   | Click to review cart details and proceed to checkout.     |
| Profile/user icon            | Represents account login, role selection, or profile details.                                             | Click to open the profile, login, or role selection page. |
| Plus/minus icon              | Expands FAQ content or adjusts item quantity.                                                             | Click to show or hide information or change quantity.     |
| Edit icon                    | Indicates that existing data can be updated.                                                              | Click to open the edit form.                              |
| Delete icon                  | Indicates removal of a selected item or record.                                                           | Click only when the item should be removed.               |
| Dropdown arrow               | Displays a list of options such as order type, bank, staff role, or category.                             | Click and select one option.                              |
| Input field                  | Area for typing information such as username, password, email, phone number, address, or special request. | Click the field and enter the required information.       |

|                                                      |                |

## 3.2 Customer Interface Screens

The customer interface contains all screens needed for browsing the menu, creating an account, logging in, editing profile details, ordering food, making payments, viewing receipts, and submitting reservations. The screenshots below use numbered labels, and each label is explained in the table under the screenshot.

### 3.2.1 Customer Home and Main Navigation Screen

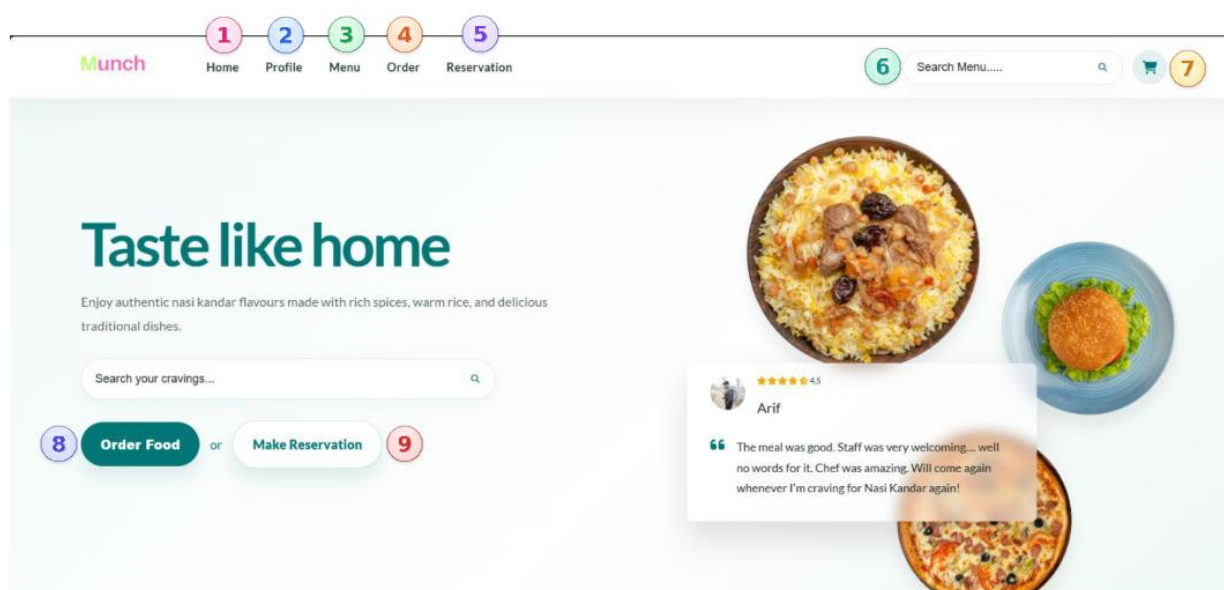

Figure 3: Customer Home and Main Navigation Screen

| No | Label              | Description                                                                                                                                                                                                                                             |
|----|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1  | Home button        | Navigates the customer back to the landing or home page.                                                                                                                                                                                                |
| 2  | Profile button     | Opens the profile access page where the user can choose Customer, Staff, or Owner login.                                                                                                                                                                |
| 3  | Menu button        | Navigates to the Munch menu page to browse food categories and items.                                                                                                                                                                                   |
| 4  | Order button       | Navigates the customer to the order page to view or manage food orders. This function is also available through the Order Food button (8) shown on the home screen, but the customer must log in first before accessing the order feature.              |
| 5  | Reservation button | Navigates the customer to the reservation page for table or event booking. This function is also available through the Make Reservation button (9) shown on the home screen, but the customer must log in first before making or viewing a reservation. |
| 6  | Search bar         | Allows the user to search for menu items by typing a keyword.                                                                                                                                                                                           |
| 7  | Cart button        | Opens the current cart and displays selected food items for checkout.                                                                                                                                                                                   |

### 3.2.2 Customer FAQ Support Screen

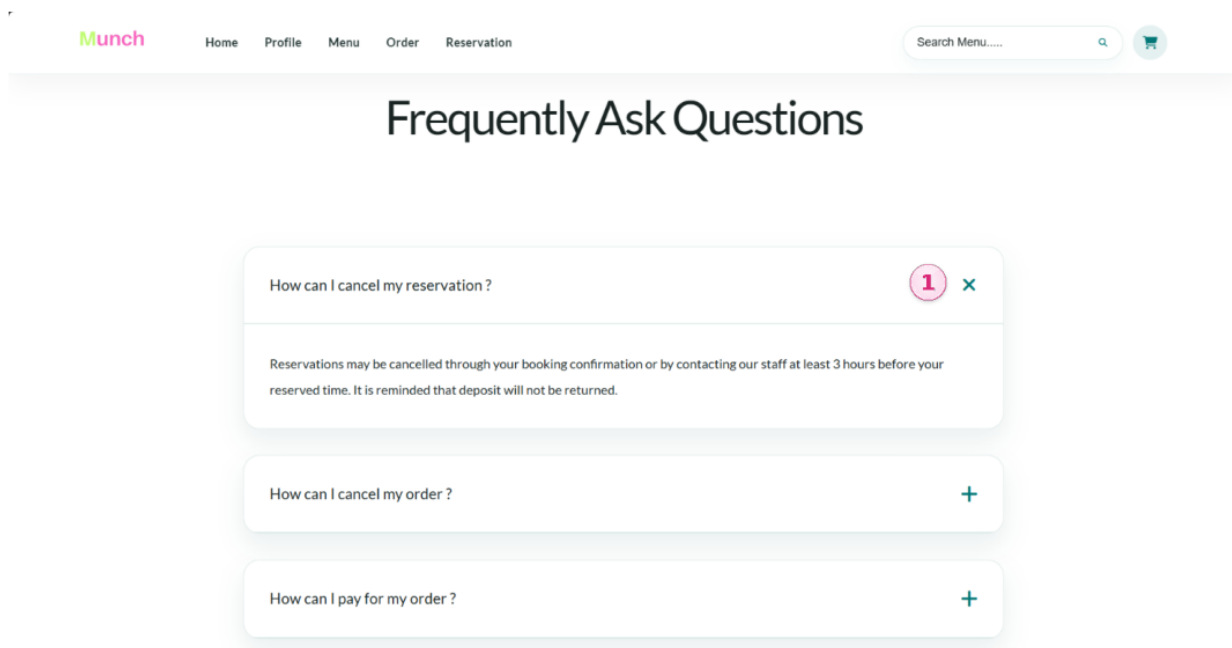

Figure 4: Customer FAQ Support Screen

| No | Label                      | Description                                                           |
|----|----------------------------|-----------------------------------------------------------------------|
| 1  | FAQ expand/collapse button | Shows or hides the answer for the selected frequently asked question. |

### 3.2.3 User Role Selection Modal

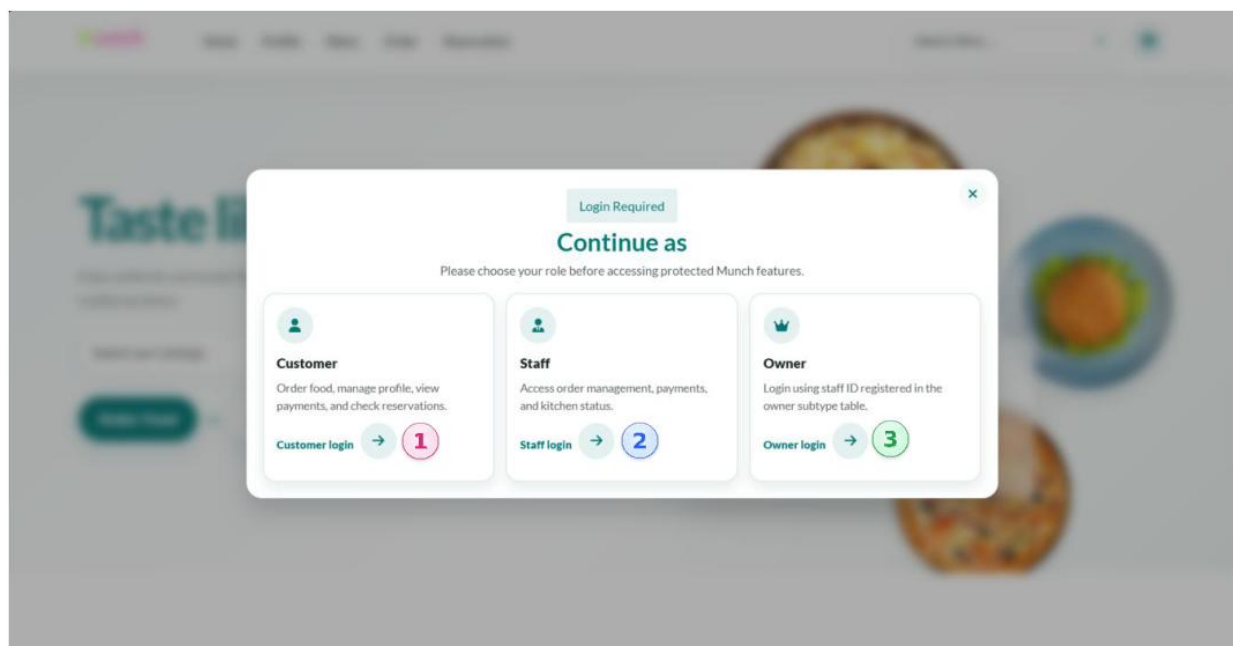

Figure 5: User Role Selection Modal

| No | Label                 | Description                                    |
|----|-----------------------|------------------------------------------------|
| 1  | Customer login button | Redirects the user to the customer login page. |
| 2  | Staff login button    | Redirects the user to the staff login page.    |
| 3  | Owner login button    | Redirects the user to the owner login page.    |

### 3.2.4 Customer Account Login Screen

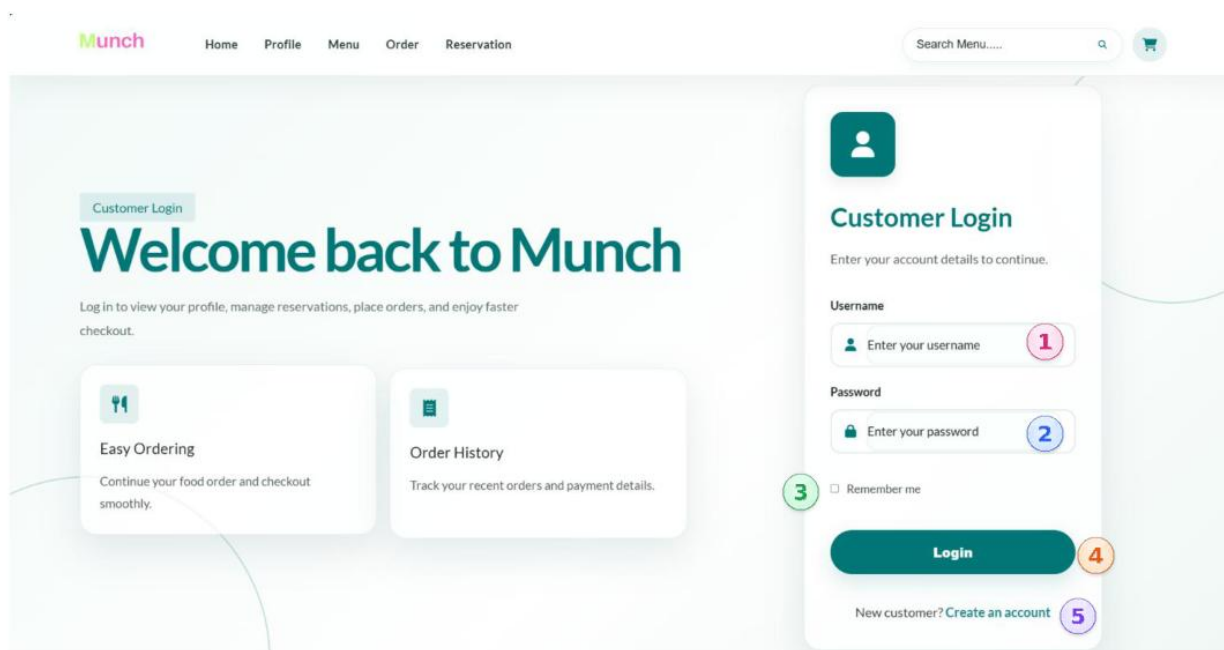

Figure 6: Customer Account Login Screen

| No | Label                  | Description                                                                  |
|----|------------------------|------------------------------------------------------------------------------|
| 1  | Username field         | Allows the customer to enter their registered username.                      |
| 2  | Password field         | Allows the customer to enter their account password.                         |
| 3  | Remember me checkbox   | Saves the customer's login information on the device for future sessions.    |
| 4  | Login button           | Validates the username and password, then logs the customer into the system. |
| 5  | Create an account link | Redirects new customers to the customer registration page.                   |

### 3.2.5 Customer Account Registration Screen

#### 1.5 Customer Account Registration Screen

The screenshot shows the 'Create your Munch account' registration form. It includes the following fields and elements:

- Full Name:** Field with placeholder 'Enter your full name' (1).
- Username:** Field with placeholder 'Choose a username' (2).
- Email Address:** Field with placeholder 'Example: yourname@email' (3).
- Phone Number:** Field with placeholder 'Example: 0123456789' (4).
- Password:** Field with placeholder 'Minimum 8 characters' (5).
- Confirm Password:** Field with placeholder 'Confirm your password' (6).
- Terms and Conditions:** Checkbox with text 'I agree to the terms and conditions' (7).
- Create Account:** Button (8).

The background features the Munch logo, navigation links (Home, Profile, Menu, Order, Reservation), a search bar, and a shopping cart icon.

Figure 7: Customer Account Registration Screen

| No | Label                         | Description                                                                                                       |
|----|-------------------------------|-------------------------------------------------------------------------------------------------------------------|
| 1  | Full Name field               | Allows the customer to enter their full name for account registration.                                            |
| 2  | Username field                | Allows the customer to create a unique username.                                                                  |
| 3  | Email Address field           | Allows the customer to enter an email address for verification and receipt purposes.                              |
| 4  | Phone Number field            | Allows the customer to enter their contact number.                                                                |
| 5  | Password field                | Allows the customer to create a secure password.                                                                  |
| 6  | Confirm Password field        | Requires the customer to re-enter the password for confirmation.                                                  |
| 7  | Terms and Conditions checkbox | Allows the customer to confirm that they agree with the system's terms and conditions before creating an account. |
| 8  | Create Account button         | Submits the registration form and creates a customer account if all details are valid.                            |

### 3.2.6 Customer Email Verification Screen

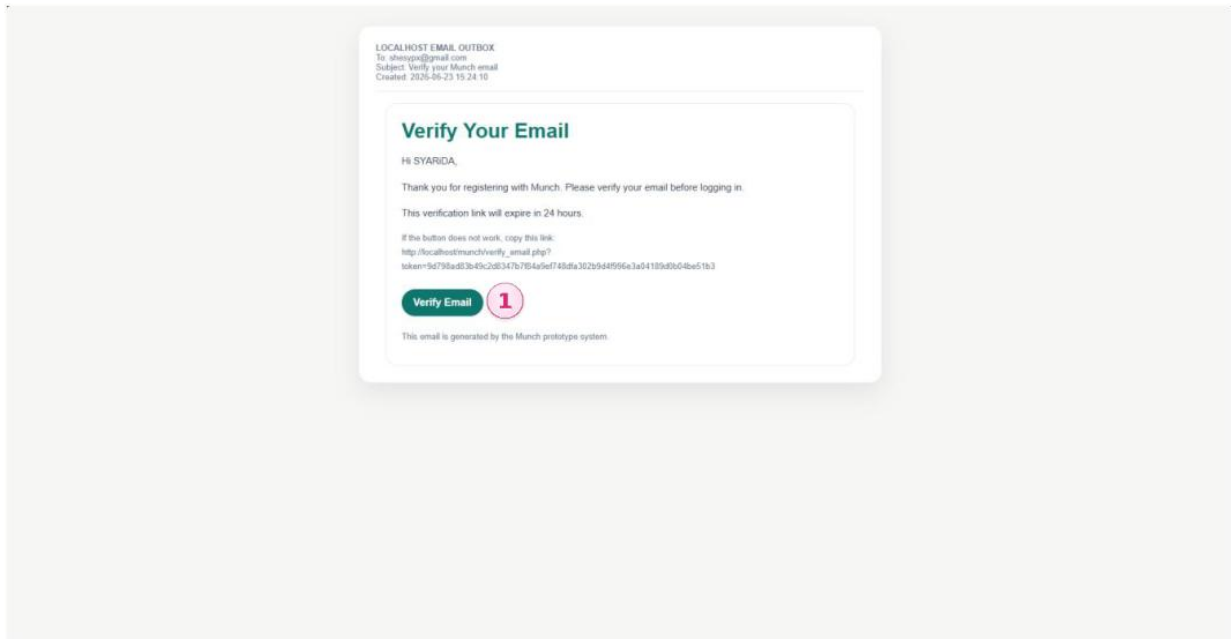

Figure 8: Customer Email Verification Screen

| No | Label               | Description                                                             |
|----|---------------------|-------------------------------------------------------------------------|
| 1  | Verify Email button | Verifies the customer email address and activates the customer account. |

### 3.2.7 Successful Email Verification Screen

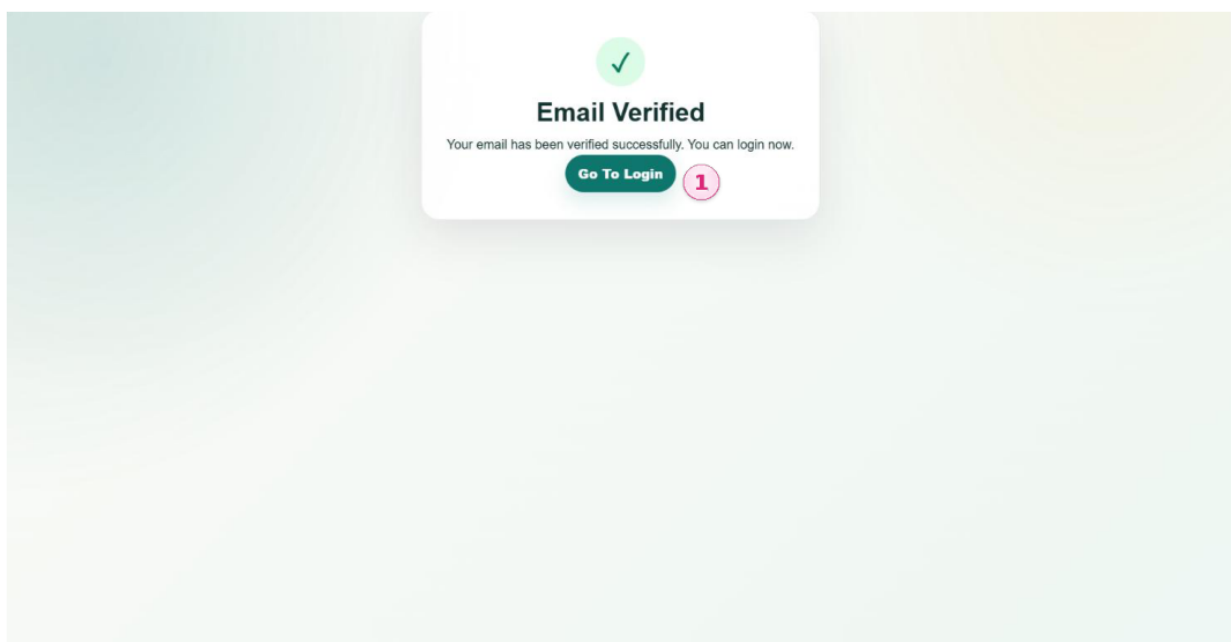

Figure 9: Successful Email Verification Screen

|                                                      |                |
|------------------------------------------------------|----------------|
| MUNCH Food Ordering and Restaurant Management System | Version: 1.0   |
| User Manual                                          | Date: 1/7/2026 |

| No | Label              | Description                                                 |
|----|--------------------|-------------------------------------------------------------|
| 1  | Go To Login button | Redirects the verified customer to the customer login page. |

### 3.2.8 Customer Profile Overview Screen

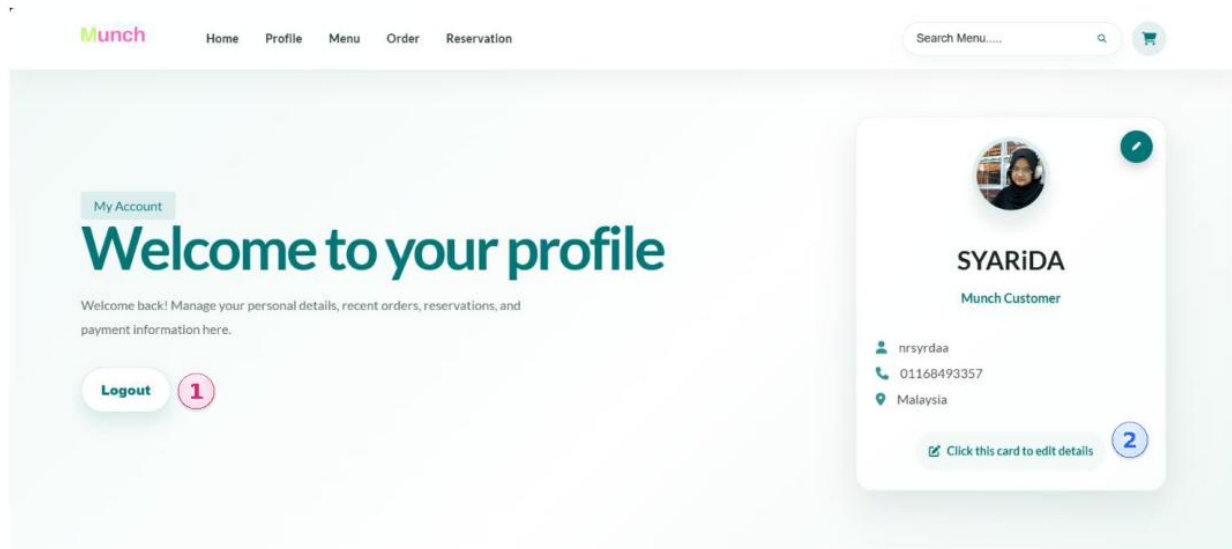

Figure 10: Customer Profile Overview Screen

| No | Label               | Description                                                        |
|----|---------------------|--------------------------------------------------------------------|
| 1  | Logout button       | Logs the customer out of the system and ends the current session.  |
| 2  | Edit details button | Opens the edit profile page for updating customer account details. |

### 3.2.9 Customer Profile Update Screen

Figure 11: Customer Profile Update Screen

| No | Label                  | Description                                                                            |
|----|------------------------|----------------------------------------------------------------------------------------|
| 1  | Full Name field        | Allows the customer to update their full name.                                         |
| 2  | Phone Number field     | Allows the customer to update their contact number.                                    |
| 3  | Profile Picture upload | Allows the customer to choose a new profile picture from their device.                 |
| 4  | New Password field     | Allows the customer to enter a new password or leave it blank to keep the current one. |
| 5  | Cancel button          | Cancels the update process and returns without saving changes.                         |
| 6  | Save Changes button    | Saves the updated profile information to the customer account.                         |

### 3.2.10 Customer Account Activity Summary Screen

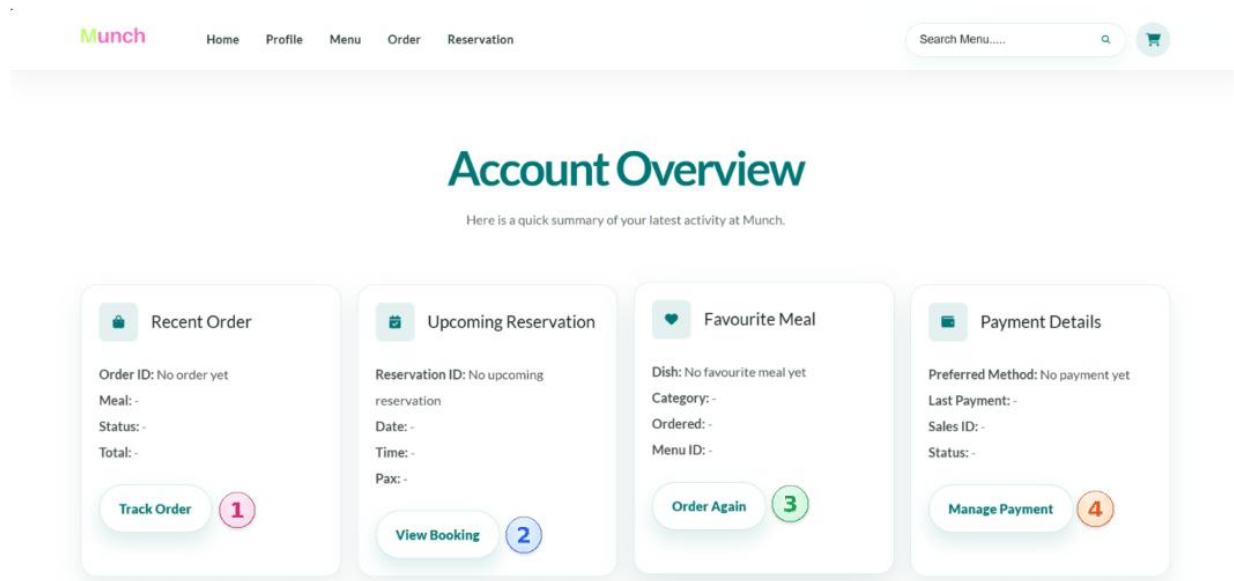

Figure 12: Customer Account Activity Summary Screen

| No | Label                 | Description                                                        |
|----|-----------------------|--------------------------------------------------------------------|
| 1  | Track Order button    | Redirects the customer to the order tracking or recent order page. |
| 2  | View Booking button   | Redirects the customer to their reservation or booking details.    |
| 3  | Order Again button    | Allows the customer to reorder a favourite or previous meal.       |
| 4  | Manage Payment button | Redirects the customer to payment details or payment management.   |

### 3.2.11 Menu Category Filter Screen

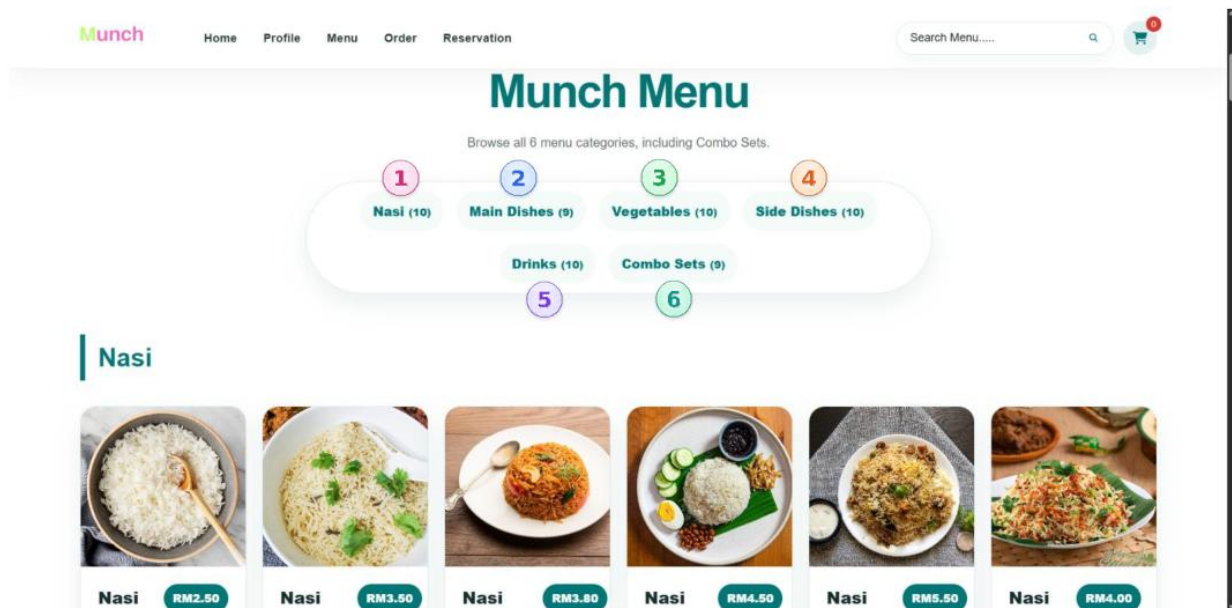

Figure 13: Menu Category Filter Screen

| No | Label                       | Description                                             |
|----|-----------------------------|---------------------------------------------------------|
| 1  | Nasi category button        | Filters the menu to show items under the Nasi category. |
| 2  | Main Dishes category button | Filters the menu to show main dish items.               |
| 3  | Vegetables category button  | Filters the menu to show vegetable menu items.          |
| 4  | Side Dishes category button | Filters the menu to show side dish items.               |
| 5  | Drinks category button      | Filters the menu to show drink items.                   |
| 6  | Combo Sets category button  | Filters the menu to show combo set items.               |

### 3.2.12 Menu Browsing and Food Selection Screen

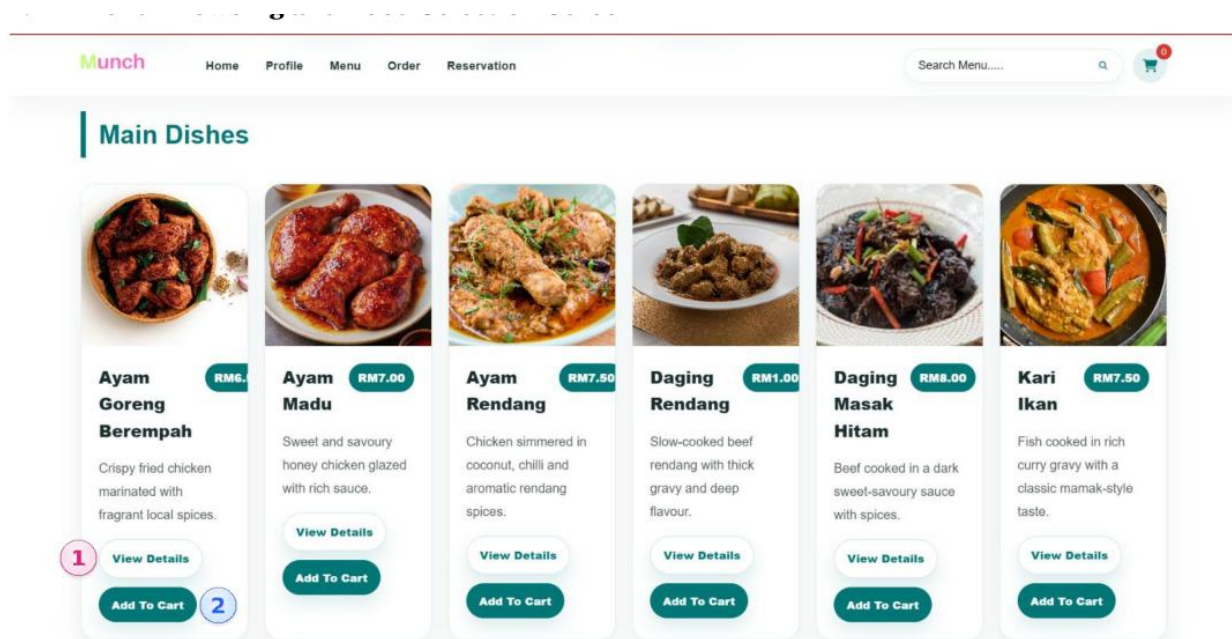

Figure 14: Menu Browsing and Food Selection Screen

| No | Label               | Description                                                                            |
|----|---------------------|----------------------------------------------------------------------------------------|
| 1  | View Details button | Opens the selected menu detail page with price, description, and category information. |
| 2  | Add To Cart button  | Adds the selected food item to the customer cart.                                      |

### 3.2.13 Food Item Details Screen

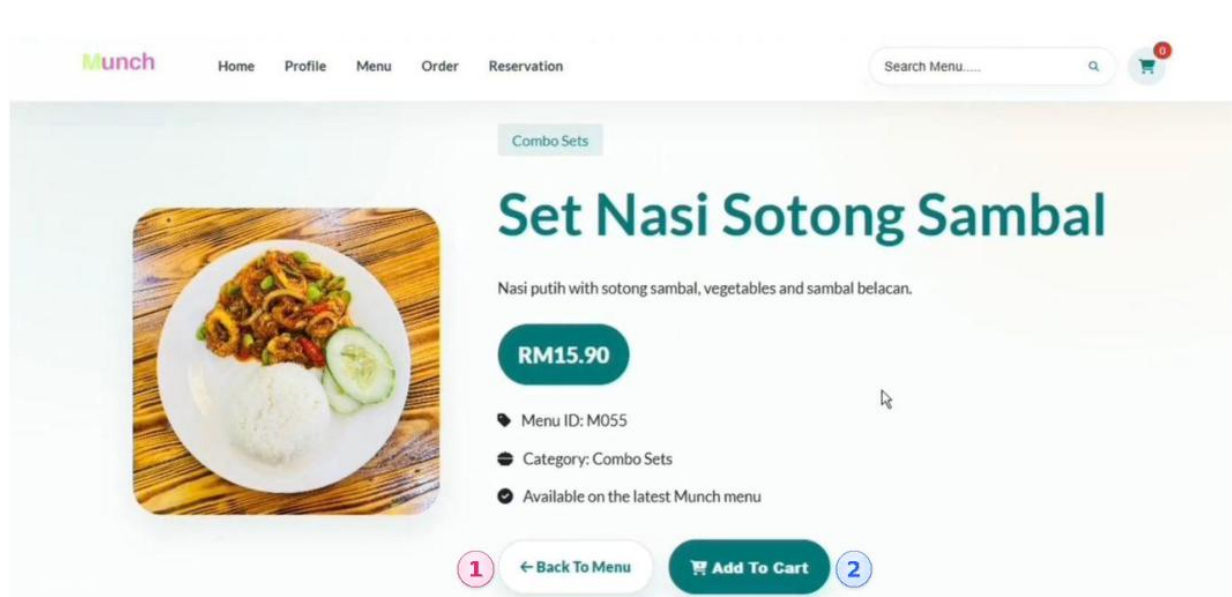

Figure 15: Food Item Details Screen

| No | Label               | Description                                            |
|----|---------------------|--------------------------------------------------------|
| 1  | Back To Menu button | Redirects the customer back to the menu browsing page. |
| 2  | Add To Cart button  | Adds the selected food item to the customer cart.      |

### 3.2.14 Cart Review and Checkout Preparation Screen

Figure 16: Cart Review and Checkout Preparation Screen

| No | Label                      | Description                                                                        |
|----|----------------------------|------------------------------------------------------------------------------------|
| 1  | Decrease quantity button   | Reduces the quantity of the selected cart item by one.                             |
| 2  | Increase quantity button   | Increases the quantity of the selected cart item by one.                           |
| 3  | Remove item button         | Removes the selected item from the cart.                                           |
| 4  | Order Type dropdown        | Allows the customer to choose the order type such as dine-in, pickup, or delivery. |
| 5  | Delivery Address field     | Allows the customer to enter the delivery address when delivery is selected.       |
| 6  | Payment Method dropdown    | Allows the customer to choose the preferred payment method.                        |
| 7  | Special Request field      | Allows the customer to enter extra notes for the order.                            |
| 8  | Proceed To Checkout button | Confirms the cart details and moves the customer to the checkout/payment process.  |
| 9  | Clear Cart button          | Removes all items from the current cart.                                           |
| 10 | Cart status display        | Shows the current cart status, such as whether the cart is ready for checkout.     |

### 3.2.15 Secure Payment Processing Screen

Figure 17: Secure Payment Processing Screen

| No | Label                     | Description                                                                                   |
|----|---------------------------|-----------------------------------------------------------------------------------------------|
| 1  | Payment method buttons    | Allows the customer to choose a payment method such as card, online banking, e-wallet, or QR. |
| 2  | Bank dropdown             | Allows the customer to select the bank for online banking payment.                            |
| 3  | Account Holder Name field | Allows the customer to enter the payment account holder's name.                               |
| 4  | TAC/OTP field             | Allows the customer to enter the transaction authentication code or one-time password.        |
| 5  | Email for Receipt field   | Allows the customer to enter the email address that will receive the receipt.                 |
| 6  | Approve Payment button    | Processes and approves the payment for the order.                                             |
| 7  | Cancel button             | Cancels the payment process and returns to the previous page.                                 |

### 3.2.16 Order Receipt Confirmation Screen

The screenshot displays the 'Order Receipt Confirmation Screen' in the MUNCH application. The top navigation bar includes 'Home', 'Menu', 'My Orders', and 'Reservation'. The main content area shows order details for a user with email 'shesypx@gmail.com' and phone '01168493357'. The payment method is 'Online Banking' and the order type is 'Pickup'. The delivery address and special request are both marked with a dash '-'. Below this, a table lists the ordered items:

| Item             | Qty | Unit    | Subtotal |
|------------------|-----|---------|----------|
| Nasi Ayam Hainan | 1   | RM10.00 | RM10.00  |
| Subtotal         |     |         | RM10.00  |
| Service Tax 6%   |     |         | RM0.60   |
| Total Paid       |     |         | RM10.60  |

At the bottom of the screen, there are three numbered buttons: 1. Download PDF (green), 2. Print (blue), and 3. Continue (green).

Figure 18: Order Receipt Confirmation Screen

| No | Label               | Description                                                                    |
|----|---------------------|--------------------------------------------------------------------------------|
| 1  | Download PDF button | Downloads the receipt as a PDF file.                                           |
| 2  | Print button        | Opens the browser print function to print the receipt.                         |
| 3  | Continue button     | Redirects the customer to continue using the system after viewing the receipt. |

### 3.2.17 Receipt Download and Print Options Screen

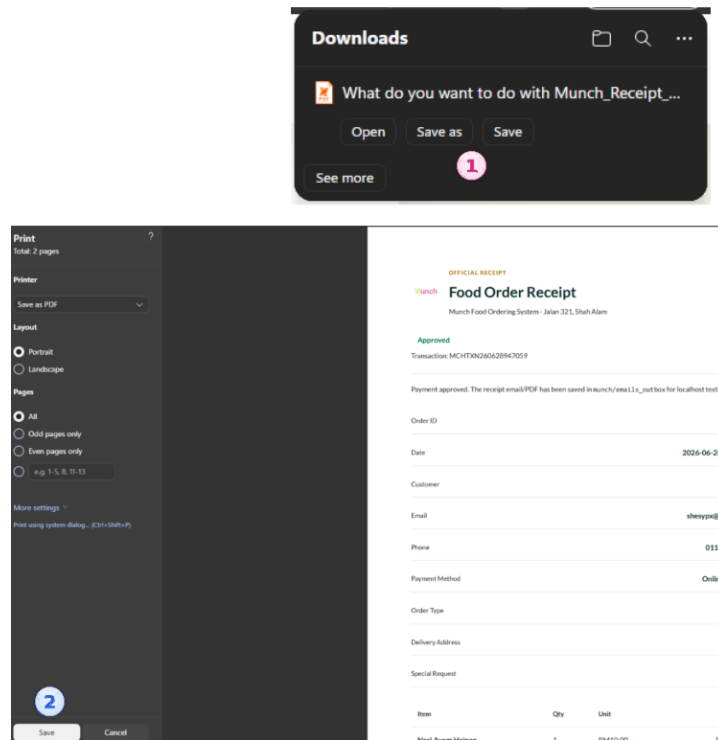

Figure 19: Receipt Download and Print Options Screen

| No | Label             | Description                                                            |
|----|-------------------|------------------------------------------------------------------------|
| 1  | Download prompt   | Allows the user to open, save, or save as the downloaded receipt file. |
| 2  | Print save button | Saves the receipt through the browser print or save-as-PDF dialog.     |

### 3.2.18 Payment Approval Email Notification Screen

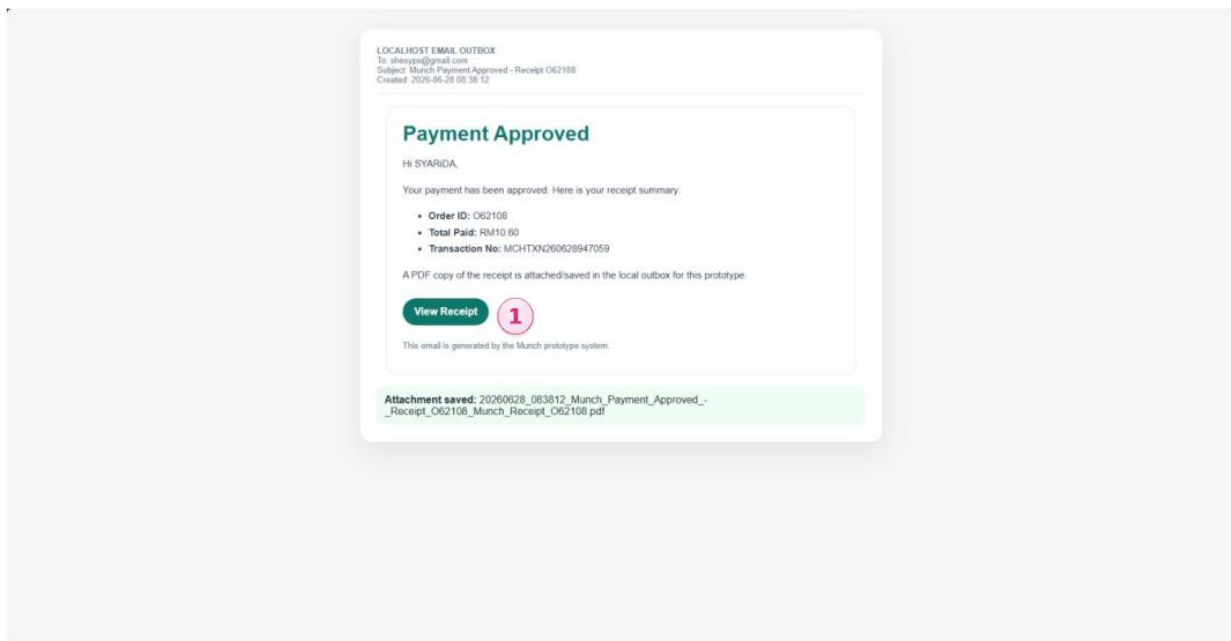

Figure 20: Payment Approval Email Notification Screen

| No | Label               | Description                                                              |
|----|---------------------|--------------------------------------------------------------------------|
| 1  | View Receipt button | Opens the approved payment receipt for the customer to view or download. |

### 3.2.19 Reservation Type and Date Selection Screen

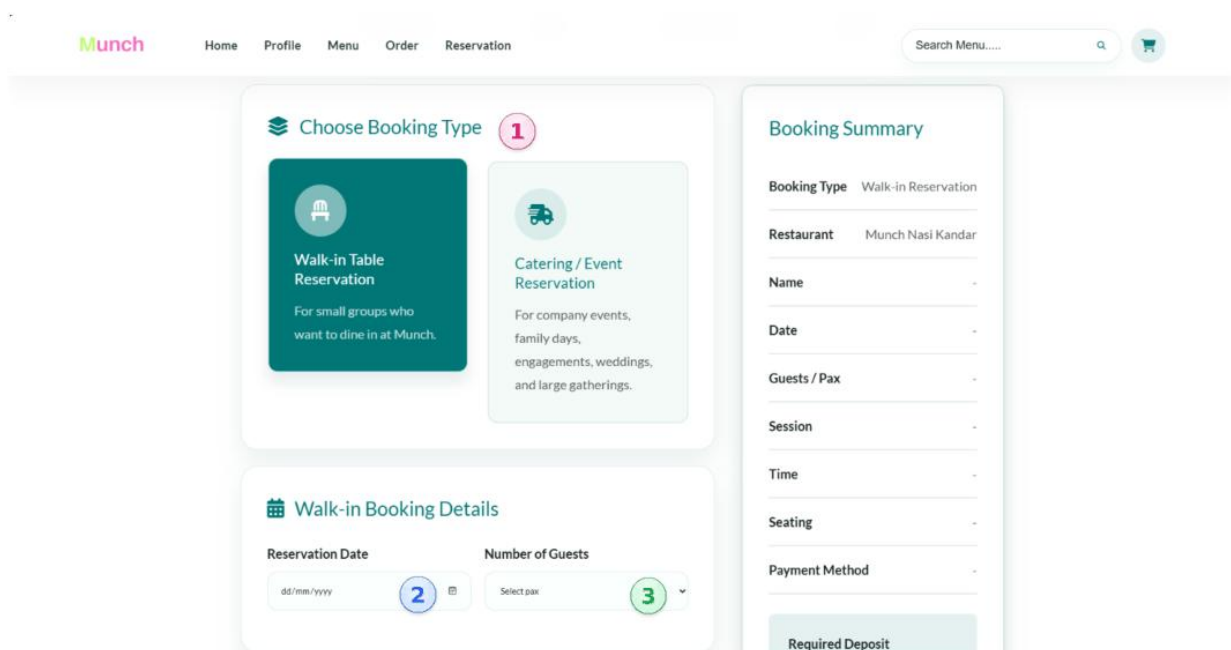

Figure 21: Reservation Type and Date Selection Screen

| No | Label                     | Description                                                                                   |
|----|---------------------------|-----------------------------------------------------------------------------------------------|
| 1  | Booking type selection    | Allows the customer to choose either walk-in table reservation or catering/event reservation. |
| 2  | Reservation Date field    | Allows the customer to select the preferred reservation date.                                 |
| 3  | Number of Guests dropdown | Allows the customer to select the number of guests or pax.                                    |

### 3.2.20 Reservation Session and Seating Selection Screen

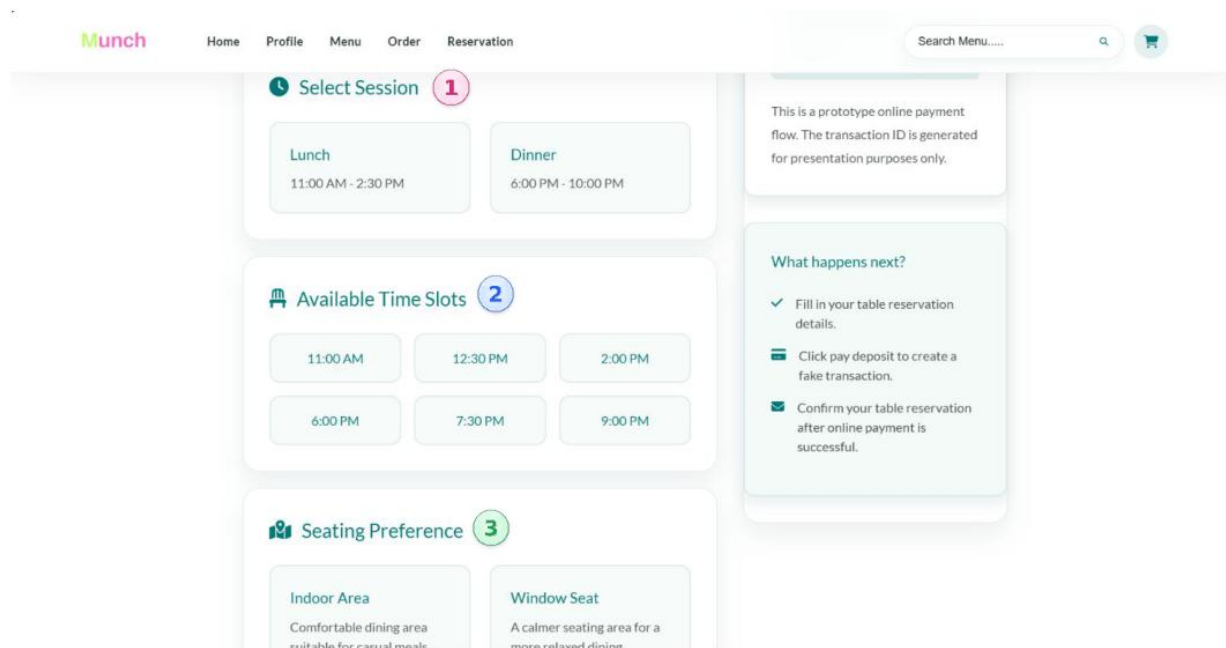

Figure 22: Reservation Session and Seating Selection Screen

| No | Label                | Description                                                               |
|----|----------------------|---------------------------------------------------------------------------|
| 1  | Session selection    | Allows the customer to choose the dining session such as lunch or dinner. |
| 2  | Available Time Slots | Allows the customer to choose an available reservation time.              |
| 3  | Seating Preference   | Allows the customer to choose the preferred seating area.                 |

### 3.2.21 Customer Reservation Details Form

The screenshot shows the 'Customer Details' form in the MUNCH application. The form is located under the 'Reservation' tab in the top navigation bar. It includes the following fields:

- Full Name** (1): A text input field with a placeholder 'Enter your full name'.
- Phone Number** (3): A text input field with a placeholder 'Example: 0123456789'.
- Email Address** (2): A text input field with a placeholder 'Enter your email address'.
- Occasion** (4): A dropdown menu with a placeholder 'Select occasion'.
- Special Request** (5): A text area with a placeholder 'Example: baby chair, less spicy food, birthday setup, delivery instructions, etc.'.

Below the form fields is a 'Reservation Policy' section (6) with the following text:

Please arrive on time. Tables will only be held for 15 minutes after the selected reservation time. For group bookings, customers are encouraged to update the restaurant earlier if there are any changes.

At the bottom of the policy section is a checkbox labeled 'I agree to the reservation terms and conditions.'.

Figure 23: Customer Reservation Details Form

| No | Label                         | Description                                                                |
|----|-------------------------------|----------------------------------------------------------------------------|
| 1  | Full Name field               | Allows the customer to enter their full name for the reservation.          |
| 2  | Email Address field           | Allows the customer to enter an email address for booking confirmation.    |
| 3  | Phone Number field            | Allows the customer to enter their contact number.                         |
| 4  | Occasion dropdown             | Allows the customer to select the occasion or event type.                  |
| 5  | Special Request field         | Allows the customer to enter additional booking requests or instructions.  |
| 6  | Terms and Conditions checkbox | Confirms that the customer agrees to the reservation terms and conditions. |

### 3.2.22 Reservation Review and Submission Screen

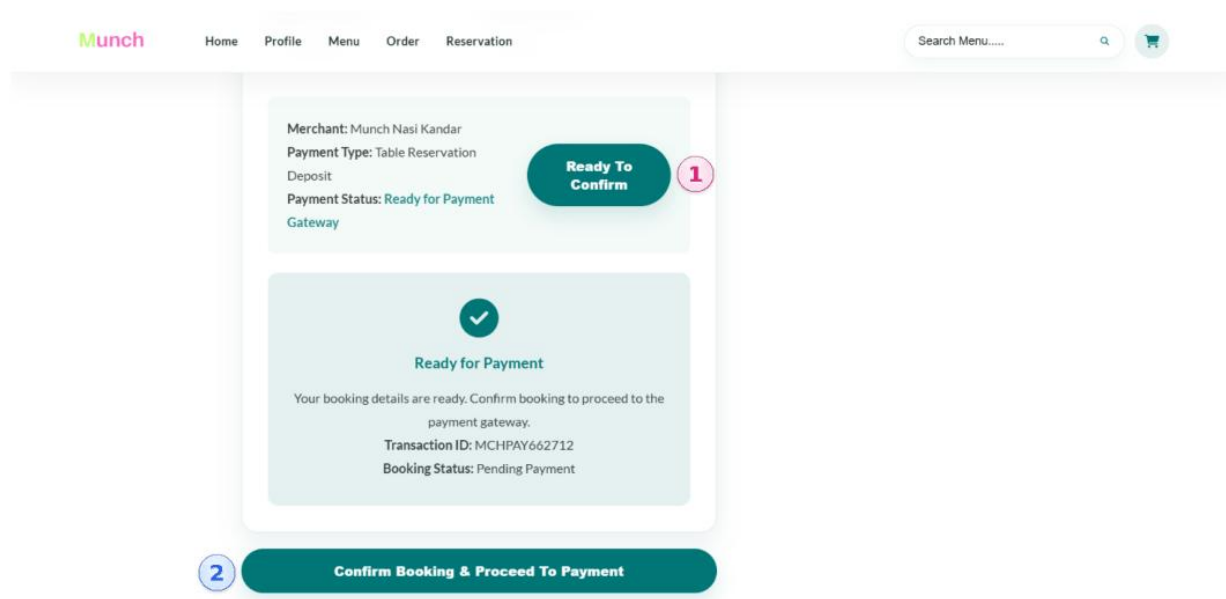

Figure 24: Reservation Review and Submission Screen

| No | Label                                       | Description                                                                  |
|----|---------------------------------------------|------------------------------------------------------------------------------|
| 1  | Ready To Confirm button                     | Indicates that the booking details are ready for confirmation and payment.   |
| 2  | Confirm Booking & Proceed to Payment button | Confirms the booking details and redirects the customer to the payment page. |

### 3.3 Staff Interface Screens

The staff interface is used for restaurant operation tasks. Staff users can log in, register an authorized staff account, view the dashboard, manage active orders, and view order details or status messages.

#### 3.3.1 Staff Account Login Screen

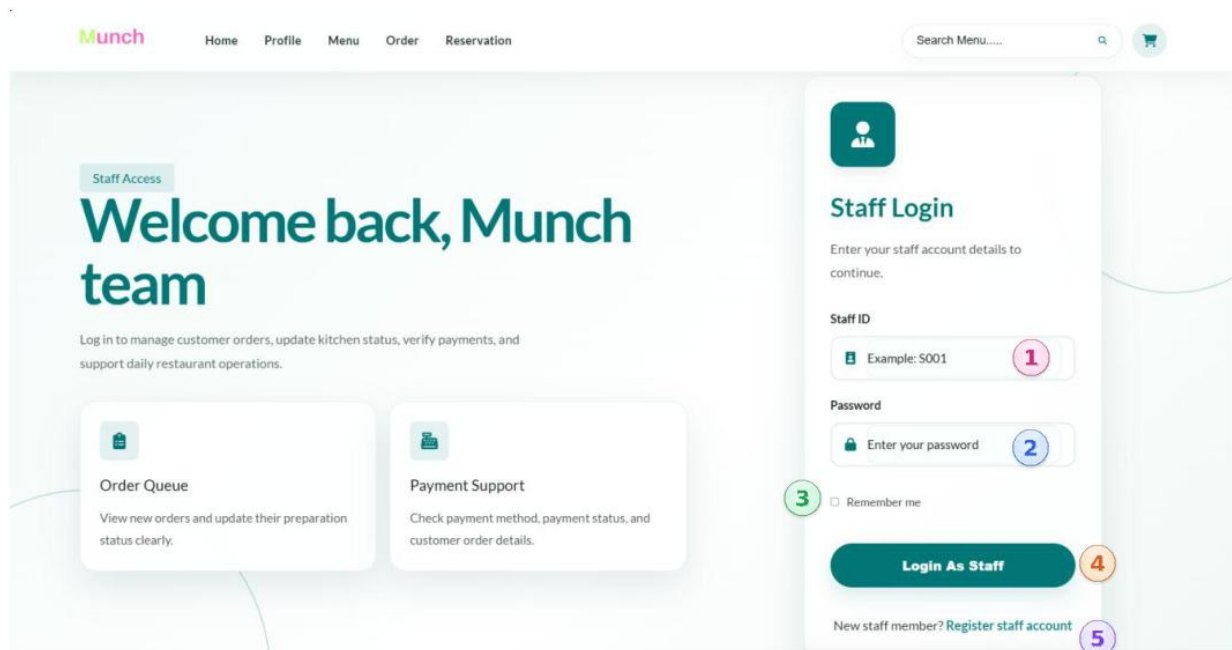

Figure 25: Staff Account Login Screen

| No | Label                       | Description                                                      |
|----|-----------------------------|------------------------------------------------------------------|
| 1  | Staff ID field              | Allows staff to enter their registered staff ID.                 |
| 2  | Password field              | Allows staff to enter their account password.                    |
| 3  | Remember me checkbox        | Keeps the staff login information remembered on the device.      |
| 4  | Login As Staff button       | Validates the staff login details and opens the staff dashboard. |
| 5  | Register staff account link | Redirects new staff members to the staff registration page.      |

### 3.3.2 Staff Account Registration Screen

Figure 26: Staff Account Registration Screen

| No | Label                       | Description                                                                 |
|----|-----------------------------|-----------------------------------------------------------------------------|
| 1  | Full Name field             | Allows staff to enter their full name during registration.                  |
| 2  | Staff ID field              | Allows staff to enter or create a staff identification number.              |
| 3  | Phone Number field          | Allows staff to enter their contact number.                                 |
| 4  | Staff Role dropdown         | Allows staff to choose their role, such as kitchen or counter staff.        |
| 5  | Password field              | Allows staff to create a secure password.                                   |
| 6  | Confirm Password field      | Requires staff to re-enter the password for confirmation.                   |
| 7  | Authorization checkbox      | Confirms that the staff account is for authorized Munch staff use only.     |
| 8  | Create Staff Account button | Submits the staff registration form and creates the staff account if valid. |
| 9  | Login here link             | Redirects registered staff to the staff login page.                         |

|                                                      |                |

|----|------------------------------|------------------------------------------------------------|
| 1  | Open menu control button     | Opens the menu management module.                          |
| 2  | Open employee records button | Opens the employee records module.                         |
| 3  | Open reports button          | Opens the reports and analytics module.                    |
| 4  | Open booking tracker button  | Opens the reservation and catering booking tracker module. |

### 3.4.4 Owner Menu Management Overview Screen

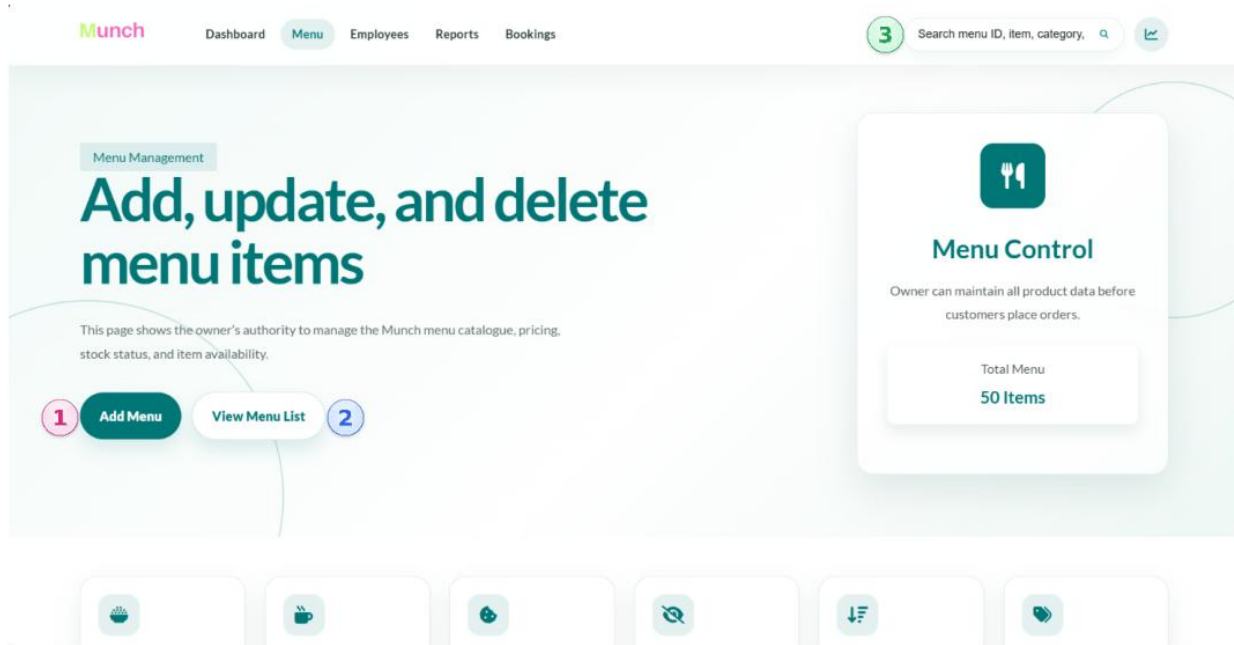

Figure 33: Owner Menu Management Overview Screen

| No | Label                 | Description                                                              |
|----|-----------------------|--------------------------------------------------------------------------|
| 1  | Add Menu button       | Opens the form to add a new menu item.                                   |
| 2  | View Menu List button | Displays the list of existing menu items for review or update.           |
| 3  | Search menu field     | Allows the owner to search for menu items by ID, item name, or category. |

### 3.4.5 Add New Menu Item Screen

The screenshot shows the 'Add New Menu Item' form in the MUNCH application. The form is titled 'Use this form to present menu item details clearly for owner review.' and contains the following fields and controls:

- Menu Name:** A text input field with a green icon, containing the text 'Nasi Kandar Ayam Madu'.
- Price (RM):** A text input field with a green icon, containing the text '12.90'.
- Availability:** A dropdown menu with a green icon, showing 'Available'.
- Category:** A dropdown menu with a green icon, showing 'Choose category'.
- Stock Quantity:** A text input field with a green icon, containing the text '60'.
- Menu Badge:** A dropdown menu with a green icon, showing 'Normal'.
- Menu Image:** A file upload field with a green icon, showing 'Choose File' and 'No file chosen'.
- Image Preview:** A large light green area with the text 'No image selected yet'.
- Description:** A text area with a green icon, containing the text 'Short menu description for customers...'.
- Buttons:** At the bottom, there are two buttons: 'Save Menu Item' (green) and 'Clear Form' (light blue).

Numbered callouts (1-11) are placed around the form to identify specific elements for the user manual.

Figure 34: Add New Menu Item Screen

| No | Label                 | Description                                                          |
|----|-----------------------|----------------------------------------------------------------------|
| 1  | Menu Name field       | Allows the owner to enter the name of the new menu item.             |
| 2  | Price field           | Allows the owner to enter the item price in RM.                      |
| 3  | Availability dropdown | Allows the owner to decide whether the new item is available.        |
| 4  | Category dropdown     | Allows the owner to choose the menu category for the item.           |
| 5  | Stock Quantity field  | Allows the owner to enter the available stock quantity.              |
| 6  | Menu Badge dropdown   | Allows the owner to assign a badge or status label to the menu item. |
| 7  | Menu Image upload     | Allows the owner to upload an image for the menu item.               |
| 8  | Image preview area    | Displays the selected menu image before saving.                      |
| 9  | Description field     | Allows the owner to enter a description for the menu item.           |
| 10 | Save Menu Item button | Saves the new the menu item into the system.                         |
| 11 | Clear Form button     | Clears all entered details from the add menu form.                   |

### 3.4.6 Menu Item Update Form

The screenshot shows the 'Fast Update Panel' in the MUNCH system. It features two main sections: 'Price Update' and 'Stock Update'. The 'Price Update' section includes a dropdown menu (1) for selecting an item, a text input field (2) for the new price, and an 'Update Price' button (3). The 'Stock Update' section includes a dropdown menu (4) for selecting an item, a text input field (5) for the new availability status, and an 'Update Status' button (6). The panel is titled 'Fast Update Panel' and includes a description: 'This panel is useful during peak hour when the owner needs to quickly update price, stock, or visibility.'

Figure 35: Menu Item Update Form

| No | Label                   | Description                                                                  |
|----|-------------------------|------------------------------------------------------------------------------|
| 1  | Item selection dropdown | Allows the owner to choose the menu item whose price will be updated.        |
| 2  | New Price field         | Allows the owner to enter the updated price for the selected item.           |
| 3  | Update Price button     | Saves the new price for the selected menu item.                              |
| 4  | Item selection dropdown | Allows the owner to choose the menu item whose availability will be updated. |
| 5  | Availability dropdown   | Allows the owner to choose the new availability status.                      |
| 6  | Update Status button    | Saves the updated availability status for the selected menu item.            |

### 3.4.7 Existing Menu Item Selection Screen

| 3  | Search booking field       | Allows the owner to search for bookings by reservation ID or customer information. |

## 4. Basic Operations

### 4.1 Login and Logout Procedures

| User Role | Login Procedure                                                                                  | Logout Procedure                                            |
|-----------|--------------------------------------------------------------------------------------------------|-------------------------------------------------------------|
| Customer  | Click Profile, choose Customer Login, enter username and password, then click Login.             | Open the customer profile overview screen and click Logout. |
| Staff     | Click Profile, choose Staff Login, enter staff ID and password, then click Login As Staff.       | Click Logout from the staff dashboard.                      |
| Owner     | Click Profile, choose Owner Login, enter owner staff ID and password, then click Login As Owner. | Click Logout from the owner dashboard.                      |

### 4.2 Navigation

- **Home:** Returns the user to the landing page.
- **Profile:** Opens the role selection modal and account-related pages.
- **Menu:** Shows menu categories and menu item cards.
- **Order:** Opens customer order functions. Login is required.
- **Reservation:** Opens table reservation or event booking functions. Login is required.
- **Cart:** Opens the current selected food items for checkout.

### 4.3 Common Tasks

#### a. Searching for a Menu Item

2. Click the search bar on the top navigation area or menu page.
3. Type the menu keyword, such as rice, drink, chicken, combo, or vegetable.
4. Review the matching food items displayed by the system.
5. Click View Details or Add To Cart for the preferred item.

#### b. Opening Protected Features

1. Click Order, Reservation, Order Food, or Make Reservation.
2. If the role selection modal appears, choose Customer Login.
3. Enter the correct login details or create a new account first.
4. Continue the ordering or reservation process after successful login.

|                                                      |                |

| MUNCH Food Ordering and Restaurant Management System | Version: 1.0   |
| User Manual                                          | Date: 1/7/2026 |

## **5. Order and Reservation Management**

### **5.1 Making a Food Order**

1. Open the Menu page or click Order Food from the landing page.
2. Select a category such as Nasi, Main Dishes, Vegetables, Side Dishes, Drinks, or Combo Sets.
3. Click View Details to read item information or click Add To Cart to select the item immediately.
4. Open the cart and review the selected items, quantity, subtotal, service tax, and total amount.
5. Choose the order type, payment method, and special request if needed.
6. Click Proceed To Checkout.
7. Complete the payment details on the payment page.
8. Click Approve Payment and wait for the receipt confirmation.

### **5.2 Modifying or Cancelling an Order**

1. Before checkout, open the cart page.
2. Use the increase or decrease quantity buttons to adjust item quantity.
3. Use the remove item button to delete an item from the cart.
4. Click Clear Cart if all selected items should be removed.
5. If payment has already been approved, contact restaurant staff for assistance because the current version focuses on order submission and tracking rather than automatic cancellation after payment.

### **5.3 Making a Table Reservation or Event Booking**

1. Click Reservation or Make Reservation from the home page.
2. Choose the booking type, such as walk-in table reservation or catering/event reservation.
3. Select the reservation date and number of guests.
4. Choose the dining session, available time slot, and seating preference.
5. Enter full name, email address, phone number, occasion, and special request if needed.
6. Agree to the terms and conditions.
7. Review the booking summary and click Confirm Booking & Proceed to Payment.
8. Complete the payment process and view the reservation receipt.

|                                                      |                |
|------------------------------------------------------|----------------|
| MUNCH Food Ordering and Restaurant Management System | Version: 1.0   |
| User Manual                                          | Date: 1/7/2026 |

## 5.4 Staff Order Management

1. Log in as Staff.
2. Open the Staff Operations Dashboard.
3. Click View Orders or review the active order list.
4. Search for a specific order if needed.
5. Open the order details pop-up or action button.
6. Read the customer order, quantity, order type, request, and payment status.
7. Update or monitor the order status according to the restaurant workflow.

## 5.5 Owner Reservation Monitoring

1. Log in as Owner.
2. Open the Owner Management Dashboard or Owner Control Centre.
3. Click Bookings or Booking Tracker.
4. Choose Reservation Tracker to view normal table reservations.
5. Choose Catering Tracker to view event or catering records.
6. Use the search field to find bookings by reservation ID or customer information.

|                                                      |                |

## 6. User Account Management

### 6.1 Creating and Managing Customer Account

- **Sign Up:** Provide full name, username, email address, phone number, password, confirm password, and agreement to terms and conditions.
- **Email Verification:** Click Verify Email to activate the customer account.
- **Login:** Enter the registered username and password on the customer login page.
- **Profile Management:** Open the profile overview and click Edit Details to update full name, phone number, profile picture, or password.
- **Logout:** Click the Logout button from the profile overview page when finished.

### 6.2 Managing Staff Account

- **Staff Login:** Enter the registered staff ID and password to access the staff dashboard.
- **Staff Registration:** Enter full name, staff ID, phone number, staff role, password, confirm password, and authorization confirmation.
- **Access Control:** Staff users can only access operational screens such as active orders, payment checks, and kitchen or order status information.

### 6.3 Managing Owner Account

- **Owner Login:** Enter the registered owner staff ID and password.
- **Admin Access:** The owner can access menu management, employee records, reports, analytics, and booking monitoring.
- **Security:** Owner access should only be used by authorized administrators because it controls important restaurant records.

### 6.4 Managing Preferences

The current user preference functions focus mainly on profile details, payment-related information, and booking or order activity. Customers can update their basic profile details and manage order or reservation activity through the account overview and profile screens. Future versions may expand this area with notification settings, password recovery, and advanced account preferences.

|                                                      |                |

| User Manual                                          | Date: 1/7/2026 |

## 7. Payment Processing

### 7.1 Adding or Choosing Payment Methods

1. Open the cart checkout page or reservation payment page.
2. Choose a payment method such as online banking, card, e-wallet, or QR if available on the payment page.
3. For online banking, select the bank from the dropdown list.
4. Enter the account holder name, TAC/OTP, and email address for receipt.
5. Check the payment amount before approving the payment.

### 7.2 Making Payments

During checkout, the customer must complete the payment form and click Approve Payment. After the payment is approved, the system generates a receipt and shows the confirmation page. The receipt can be downloaded as a PDF or printed using the browser print function.

### 7.3 Viewing Payment History and Receipts

- **Order Receipt:** Shows order details, total payment, and confirmation information after checkout.
- **Download PDF:** Downloads the receipt as a PDF file.
- **Print:** Opens the browser print or save-as-PDF dialog.
- **Email Notification:** The payment approval email notification includes a View Receipt button for accessing the receipt.

### 7.4 Payment Calculation Notes

- **Item Subtotal:** Item price multiplied by quantity.
- **Cart Total:** Sum of all item subtotals in the cart.
- **Service Tax / Additional Charges:** Shown in the cart or payment summary when applied by the system.
- **Final Amount:** Cart total plus any additional charges, or reservation deposit/payment amount shown on the payment page.

|                                                      |                |
|------------------------------------------------------|----------------|
| MUNCH Food Ordering and Restaurant Management System | Version: 1.0   |
| User Manual                                          | Date: 1/7/2026 |

## **8. Notifications and Alerts**

### **8.1 Email Verification Notification**

After customer registration, the email verification screen asks the customer to verify their email address. The customer should click Verify Email, then proceed to the successful verification screen and return to login.

### **8.2 Payment Approval Email Notification**

After a payment is approved, the system displays or sends a payment approval notification. The notification includes a View Receipt button so the customer can open the approved payment receipt for viewing, downloading, or printing.

### **8.3 Dashboard Alerts**

The owner dashboard includes priority alerts and summary cards to help the owner notice important restaurant activities. Staff dashboards show active orders and operational status, while customer pages show cart, order, and reservation feedback based on user actions.

### **8.4 Enabling or Disabling Notifications**

The current system version provides basic interface-based notifications and email-related demonstration screens. Advanced settings for enabling or disabling notification categories, such as email reminders, push notifications, or SMS alerts, can be added in future development.

## 9. Troubleshooting

### 9.1 Common Issues

| Issue                                       | Possible Cause                                                                   | Solution                                                                                                  |
|---------------------------------------------|----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| Landing page does not open                  | Server is not running, internet connection is unstable, or wrong URL is entered. | Check the URL, refresh the browser, confirm network connection, or start Apache/MySQL if using localhost. |
| Cannot log in                               | Wrong username, staff ID, owner ID, or password.                                 | Re-enter credentials carefully and make sure the correct role login page is selected.                     |
| Customer cannot access Order or Reservation | Protected features require login first.                                          | Click Profile, choose Customer Login, and log in before continuing.                                       |
| Create Account does not continue            | Required field may be empty or password confirmation does not match.             | Fill in all required fields, confirm the password, and tick the terms and conditions checkbox.            |
| Cart is empty                               | No menu item has been added or cart was cleared.                                 | Return to the menu page and click Add To Cart for the preferred item.                                     |
| Payment cannot be approved                  | Required payment fields are incomplete or invalid.                               | Select payment method, fill in bank/account/TAC/OTP/email details, then try again.                        |
| Receipt does not download                   | Browser download prompt is blocked or pop-up settings prevent the action.        | Allow downloads/pop-ups for the site or use the Print option to save as PDF.                              |
| Staff cannot see active orders              | No order has been submitted or staff dashboard did not refresh.                  | Refresh the page and confirm that customer payment/order has been completed.                              |
| Owner report data is missing                | No order, booking, payment, or sales data is available yet.                      | Use the system with sample transactions first, then reopen the report page.                               |
| Interface looks different                   | Browser compatibility or screen size issue.                                      | Use Google Chrome or Microsoft Edge and adjust zoom to 100%.                                              |

### 9.2 Contacting Support

If users cannot solve the issue using this troubleshooting guide, they should contact the system administrator, project team, or restaurant owner. When reporting a problem, include the user role, page name, action performed, error message if any, and a screenshot of the issue.

## 10. Appendices

### 10.1 Glossary

| Term            | Definition                                                                                       |
|-----------------|--------------------------------------------------------------------------------------------------|
| MUNCH           | The name of the web-based food ordering and restaurant management system.                        |
| Customer        | A restaurant user who orders food, makes payment, views receipts, and creates reservations.      |
| Staff           | A restaurant employee who manages active orders and checks operational information.              |
| Owner           | An administrator who manages menu items, staff records, reports, analytics, and booking records. |
| Cart            | A temporary area that stores select food items before checkout.                                  |
| Checkout        | The process of confirming cart details and continuing payment.                                   |
| Reservation     | A table booking or event booking submitted by the customer.                                      |
| Payment Gateway | A service or module that processes payment requests and returns payment status.                  |
| Receipt         | A confirmation document that records payment and order or booking details.                       |
| Dashboard       | A summary page that displays important information for staff or owner users.                     |

### 10.2 FAQs

| Question                                          | Answer                                                                                                                            |
|---------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Do customers need to log in before ordering?      | Yes. Customers must log in before they can place food orders or make reservations.                                                |
| Can new customers create an account?              | Yes. New customers can register by entering their full name, username, email address, phone number, and password.                 |
| Why do customers need to verify their email?      | Email verification is used to confirm that the email address belongs to the customer before the account is fully activated.       |
| Can customers update their profile details?       | Yes. Customers can update their full name, phone number, profile picture, and password through the profile update screen.         |
| Can customers browse the menu without logging in? | Yes. Customers can browse the menu, but they need to log in before placing an order or making a reservation.                      |
| Can customers search for food items?              | Yes. Customers can use the search bar to search for menu items by keyword, such as chicken, rice, drink, or combo.                |
| Can customers filter menu items by category?      | Yes. Customers can filter menu items using categories such as Nasi, Main Dishes, Vegetables, Side Dishes, Drinks, and Combo Sets. |

|                                                        |                                                                                                                                                                                 |                |
|--------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| MUNCH Food Ordering and Restaurant Management System   |                                                                                                                                                                                 | Version: 1.0   |
| User Manual                                            |                                                                                                                                                                                 | Date: 1/7/2026 |
| What happens when a customer clicks Add To Cart?       | The selected food item will be added to the cart, where the customer can review the item before checkout.                                                                       |                |
| Can customers change the quantity of food in the cart? | Yes. Customers can use the plus and minus buttons to increase or decrease the item quantity.                                                                                    |                |
| Can customers remove an item from the cart?            | Yes. Customers can remove selected food items from the cart before checkout.                                                                                                    |                |
| Can customers clear the whole cart?                    | Yes. The Clear Cart button removes all selected food items from the cart.                                                                                                       |                |
| What order types are available?                        | The system may support order types such as dine-in, pickup, or delivery depending on the available options in the cart page.                                                    |                |
| When should customers enter a delivery address?        | Customers should enter a delivery address when they choose delivery as the order type.                                                                                          |                |
| Can customers add special requests for orders?         | Yes. Customers can enter special requests, such as less spicy, no onions, or extra sauce, in the special request field.                                                         |                |
| Can customers cancel an order after payment?           | In the current version, automatic cancellation after payment is not provided. Customers need to contact restaurant staff for help.                                              |                |
| Can customers make table reservations?                 | Yes. Customers can make table reservations through the reservation module.                                                                                                      |                |
| Can customers make event or catering bookings?         | Yes. The reservation module supports normal table reservations and catering or event bookings.                                                                                  |                |
| What details are needed for a reservation?             | Customers need to enter details such as booking type, date, number of guests, session, time slot, seating preference, name, email, phone number, occasion, and special request. |                |
| Can customers choose a seating preference?             | Yes. Customers can choose the preferred seating area if the option is available.                                                                                                |                |
| What happens after confirming a reservation?           | The customer will proceed to payment and receive a reservation confirmation or receipt after payment approval.                                                                  |                |
| Does the system process real online payments?          | The current project version presents payment as a demonstration function unless a real payment gateway is integrated in the future.                                             |                |
| What payment methods are shown in the system?          | The payment page may show options such as card, online banking, e-wallet, or QR payment.                                                                                        |                |
| What is TAC or OTP used for?                           | TAC or OTP is used as a transaction authentication code during the payment process.                                                                                             |                |
| Can customers download their receipt?                  | Yes. Customers can download the receipt as a PDF file from the receipt confirmation screen.                                                                                     |                |
| Can customers print their receipt?                     | Yes. Customers can use the Print button to print the receipt or save it as a PDF file.                                                                                          |                |
| Can customers receive receipt by email?                | Yes. The payment page includes an email field for receipt purposes, and the system may show a payment approval email notification.                                              |                |

|                                                            |                                                                                                                                               |                |
|------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| MUNCH Food Ordering and Restaurant Management System       |                                                                                                                                               | Version: 1.0   |
| User Manual                                                |                                                                                                                                               | Date: 1/7/2026 |
| What should customers do if the receipt does not download? | Customers should allow browser downloads or pop-ups, then try again. They can also use the Print option to save the receipt as a PDF.         |                |
| Can staff create an account?                               | Yes. Staff can register using their full name, staff ID, phone number, role, password, and authorization confirmation.                        |                |
| What can staff do after logging in?                        | Staff can view active orders, check payment information, search for orders, and update or monitor order status.                               |                |
| Can staff see customer orders?                             | Yes. Staff can view active orders and read order details such as quantity, order type, special request, and payment status.                   |                |
| Can staff update order status?                             | Yes. Staff can update or monitor order status according to the restaurant workflow.                                                           |                |
| What should staff do if active orders are not showing?     | Staff should refresh the page and make sure that the customer has completed the order and payment process.                                    |                |
| Can the owner add new menu items?                          | Yes. The owner can add new menu items through the owner menu management screen.                                                               |                |
| Can the owner update menu prices?                          | Yes. The owner can select a menu item and update its price through the menu update form.                                                      |                |
| Can the owner change menu availability?                    | Yes. The owner can update whether a menu item is available or unavailable.                                                                    |                |
| Can the owner delete menu items?                           | Yes. The owner can remove selected menu items from the menu list.                                                                             |                |
| Can the owner manage staff records?                        | Yes. The owner can view and manage employee records through the staff record management section.                                              |                |
| Can the owner view reports?                                | Yes. The owner can view sales reports, item ranking, booking analytics, and other business report information.                                |                |
| Can the owner track reservations?                          | Yes. The owner can use the reservation tracker and catering tracker to monitor booking records.                                               |                |
| Why can't a user log in?                                   | The user may have entered the wrong username, staff ID, owner ID, password, or selected the wrong role login page.                            |                |
| What should users do if the website does not open?         | Users should check the URL, refresh the browser, check the internet connection, or make sure Apache and MySQL are running if using localhost. |                |
| Which browser is recommended for using MUNCH?              | Google Chrome or Microsoft Edge is recommended because they support modern web features and responsive design.                                |                |
| Does MUNCH need to be installed as an app?                 | No. MUNCH is a web-based system, so users only need to open it through a supported web browser.                                               |                |
| Can MUNCH be used on a phone?                              | Yes. It can be accessed through a smartphone browser if the website is available and the internet connection is stable.                       |                |

|                                                      |                                                                                                                                                                                     |                |
|------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| MUNCH Food Ordering and Restaurant Management System |                                                                                                                                                                                     | Version: 1.0   |
| User Manual                                          |                                                                                                                                                                                     | Date: 1/7/2026 |
| Who should users contact if they face a problem?     | Users should contact the system administrator, project team, or restaurant owner and include the page name, user role, action performed, error message, and screenshot if possible. |                |
